Work: bole, wolo sefer, 0000 Addis Ababa (Ethiopia)

ABOUT MYSELF

A highly skilled junior software engineer specializing in software architecture and design, with a distinguished academic record and practical experience. Currently graduated in Software Engineering with a distinction from jimma university. Proficient in various programming languages and frameworks, with a solid background in system architecture design, database management, and team leadership. Experienced in creating dynamic software architecture and design using different technology tools. Interested in AI (artificial intelligence), ML (machine learning) and cyber security. A leader in project management and cross-functional collaboration. Committed to continuous learning, innovative problem-solving, and very committed and discipline for tasks to achieve my goal.

EDUCATION

[09/2019 – 06/2024]

Bachelor of Science in Software Engineering

Courses: Requirement Engineering, Software Architecture Design, Software Design Principles, Database Design and Management, Web Development, Mobile App Development, Other.

Skills Acquired: System architecture design, database management, full-stack, web development, team leadership and others.

TECHNICAL SKILLS

[Current]

Front-End, Back-End, Version Control

HTML5, CSS, Bootstrap, CSS, JavaScript, jQuery, React, UI/UX Design Principles, Laravel, Node.js, Express.js, SQL (MySQL), Git, GitHub, Software Architecture and Design, IT support, CI/CD Tools (GitHub Actions), Database, Vite, C++, C#, JavaFx, PHP.

COMMUNICATION AND INTERPERSONAL SKILLS

Soft skills

Communication and Leadership, Team work and Collaboration Creative Problem Solving, Communications, Project Management.

LANGUAGE SKILLS

Mother tongue(s): Amharic

Other language(s):

English

LISTENING B2 READING C2 WRITING C1

SPOKEN PRODUCTION B2 SPOKEN INTERACTION B1

Levels: A1 and A2: Basic user - B1 and B2: Independent user - C1 and C2: Proficient user

WORK EXPERIENCE

Software enginner intern

Abronal Technologies PLC [06/2023 – 08/2023]

Address: logita, admas mall, hawassa (Ethiopia)

- assisted software engineer and developers in designing and implementing software of document management system.
- collecting the full requirements for the system.
- designing system architecture including database design.
- developing document management system for siddama trade office.
- participated in team meetings and contributed ideas to improve development processes.

Bot development

Hawassa Reformed Baptist Church [08/2023]

City: hawassa | **Country:** Ethiopia

- collect requirements for developing telegram bot
- designing and developing a user friendly telegram bot by using telegraf framework of node js
- and giving IT support how to use the telegram bot

Software development full final year project, Pneumonia Detection and Follow up mobile app

Jimma Institute of Technology [10/2023 – 05/2024]

City: jimma | **Country:** Ethiopia

- organize, led, and allocated tasks for the team
- collected, elicited, and analyzed requirements
- designed the system architecture
- prepared design documents for the system
- created work plans
- train and make the machine learning model by using CNNs ML algorithm using transfer learning of pre trained model like efficientnet

CERTIFICATIONS

[09/06/2022 – Current]

Introduction to Cyber Security

by Great Learning Academy. Jun 2022 Certification was issued.

Introduction to Information Security

by Great Learning Academy.

Machine Learning Introduction for Everyone

a course authorized by IBM Skills Network and offered through Coursera

Introduction to Front-End Development

a course authorized by Meta and offered through Coursera. Jun 2023 Certification was issued

Database security for cyber professionals

by Alison March 2024 Certification was issued

VOLUNTEERING

[2019 – 2024] jimma

Counseling Team Leader of Christian Student Fellowship

organizing, structuring and Leading the team. Mentoring and giving counseling service for jimma university, jit campus students and mainly giving follow up service for freshman students .

[2022 – 2023] jimma

Digital strategic team member

attending team meetings and giving participating in team discussion . attending regional digital strategic training session in Jimma for two days.

PUBLICATIONS

[2024]

Pneumonia Detection and Follow up

The Pneumonia Detection and Follow-up App is a comprehensive platform designed to improve the detection and follow up of pneumonia cases. With a focus on user experience and efficient workflow, this app offers a range of functional features. Users can register and log in securely, accessing personalized dashboards upon successful authentication. Health professionals can upload digital X-ray images in standard formats, which are processed and stored securely by the system. Through automated analysis, the system detects signs of pneumonia in uploaded images, generating diagnostic reports that highlight the severity and relevant findings. The interface of the app is customizable, allowing users to change the language preference for a more personalized experience. Push notifications ensure that users receive timely updates and alerts. Additionally, the app facilitates doctor booking, allowing users to select preferred dates and times for appointments. The app checks doctor availability and provides confirmation of the booked appointment along with relevant details. By incorporating these specifications, the Pneumonia Detection and Follow-up App optimize the diagnosis and follow-up processes, promoting efficient and effective healthcare management for pneumonia cases. The Pneumonia Detection and Follow-up App redefine healthcare management by optimizing the diagnosis and follow-up processes. By incorporating cutting-edge features and prioritizing user needs, the app emerges as a guiding light of efficiency and effectiveness in pneumonia detection and follow up care, ultimately contributing to the advancement of healthcare in the digital era.

Web and Smart Card System for Infant Immunization

This research focuses on developing a web-based smart card system to modernize immunization record-keeping for pregnant women and infants at Jimma Health Center, Ethiopia. The existing manual paper-based system poses several challenges, such as slow data retrieval, vulnerability to physical damage or loss, and excessive resource consumption. These inefficiencies often hinder the healthcare center's ability to provide timely and accurate healthcare services, making it difficult to track and manage immunization records effectively. To address these issues, we propose the implementation of a smart card system integrated with a web application that supports both online and offline functionality. The smart card will store critical immunization data, while the web-based system will allow healthcare providers to access and update records seamlessly, even in areas with limited connectivity. This approach is designed to improve data accessibility, minimize manual errors, and enable timely healthcare interventions, ultimately enhancing the quality of maternal and infant healthcare at Jimma Health Center.
